This paper illustrates the applicability and usefulness of systems approach in evaluating the sewage collection, treatment and disposal alternatives at a selected recreational area. The paper identifies the interactions among sewage collection, treatment and disposal alternatives. The analysis process considers increases in effluent loading rates with additional developments of the project over time and is designed to select the least cost combination of collection, treatment and disposal f ...

Outdoor recreation systems are comprised of three basic components: (1) a set of N population centers, (2) a set of M recreation sites, and (3) a set of at least NM connecting links. An important problem facing planners in the allocation of resources is how to estimate the magnitude of travel per unit time flowing in systems of varying characteristics. Simulation is viewed to be one possibility. A gravity-type model written in GPSS III was developed to simulate travel in a system comprising ...

Virtual Reality (VR) technology opens up many new possibilities. One of the new and upcoming areas this VR technology is rapidly being used for is in the Digital Heritage domain. With the abundant content and the need for preservation and conservation for cultural heritage, there has been an explosion of Digital Heritage projects worldwide. VR technology provides an important educational tool to recreate the cultural heritage content in an immersive high-quality 3D environment for the users to e ...

## 6 Community recreation planning by computer simulation: Golf in GPSS

William L. Tullar, Wayne F. Cascio

January 1971 **Proceedings of the 1971 26th annual conference**

**Publisher:** ACM Press

Full text available:  [pdf\(435.58 KB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

This paper deals with the computer simulation of a golf course. Using GPSS, the model was constructed to find "ideal" spacing for the tee-off times and minimal waiting time at each hole as a function of number of players on the course. The long range implications of computer simulations of recreational facilities are discussed.
